Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-56, drawn to canceling interference, classified in class 375, subclass 346.
 - II. Claims 57-76, drawn to a multi-user detection method/apparatus, classified in class 375, subclass 340.
 - III. Claims 77-88, drawn to selecting a gain factor, classified in class 375, subclass 345.
2. The inventions are distinct, each from the other because of the following reasons:

Group I refers to a method/apparatus for canceling interference produced by a plurality of user as determined from a previous discrete value during a previous sub-symbol interval. Group II refers to a multi-user detection method/apparatus that estimates bits for a symbol corresponding to a given user by interpolating the signature waveforms for some of the plurality of users to a common sampling lattice of the received set of data. Group III refers to selecting a gain factor corresponding to a desired multi-used detection algorithm.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
